

## PRESS INFORMATION

For Immediate Release

15 March, 2003

Infratech USA, an international leader in full-range infrared technology, offers a range of infrared heaters and controls for indoor or outdoor use. Infratech's Infratube Quartz Radiant Heaters use infrared energy to efficiently provide heat with pin point accuracy virtually anywhere it's desired while delivering up to 27,296 BTUs from a single fixture. Used in commercial and residential installations such as patios, pool areas, gazebos, workshops, and warehouses around the world, Infratube is completely safe (emitting only warm radiant energy) and minimizes the cost of installation and maintenance. Infratube heaters are UL listed and offered in a variety of mounting systems and voltages with a choice of stainless steel or standard powder coat finish. Offering the ability to easily be regulated for desired heat, Infratech's Infratube product line gives you the flexibility to use a variety of controls, including new multi-zone control systems, along with a wide range of accessories. For more information about the Infratube Comfort Heating Systems and the complete Infratech product line visit their web site, [www.infratech-usa.com](http://www.infratech-usa.com), or contact Infratech USA direct at 939 North Vernon Avenue, Azusa, California, 91702, USA, 800-421-9455, Fax 626-858-1951.

Photo Caption: The Infratech Infratube Pole Mount System allows the benefits of electric infrared heating in areas traditionally reserved for gas or propane units.
