

SR-IV / SR-IV IR

SHORT WAVE PORTABLE INFRARED EQUIPMENT

Exclusive **NEW** Iridium Enhanced Quartz Halogen Element

4000 Watts of short wave Infrared

Speeds Curing time 60% to 80% faster

4' x 4' coverage area

Solid state programmable control

Infrared Sensor provides precise control

Heavy duty stand

Energy efficient

UL Listed

These all new systems offer what may be the most important short wave curing advancement in decades. Only Infratech can offer this unique, new, highly efficient short wave infrared curing technology. With 4,000 watts of power the SRI-IV utilizes a solid state programmable control to give you powerful Iridium short wave portable infrared curing. Available 120 and 240 volts, with a coverage area of 4' x 4'. This unit has a solid state programmable control with electronic timer. IRIDIUM enhanced quartz halogen element puts more energy into the work and less into visible light. The SR-IV IR has the same quality features as the SR-IV but includes an infrared sensor that allows the technician to select and maintain a predetermined surface temperature until the curing process is complete. Digital controls provide complete accuracy and are easy to set up and operate. Adjustable shock arm extends to over 7' high. Stand has locking casters and a narrow foot print for mobility. Equipped with a 25' power cord. UL Listed.

SPECIFICATIONS

MODEL #	SRI-IV	SR-IV IR
